

OpenMet System

Software and technology to help you evaluate and manage feedback from people

OpenMet System is an integrated software platform to capture, diagnose and easily manage the opinions and perceptions of people (clients, workers, groups, a company, among others). OpenMet System converts the responses into numbers and creates an automatic control panel with KPI's (Key Performance Indicators) that allows you to analyze, understand and manage results better.

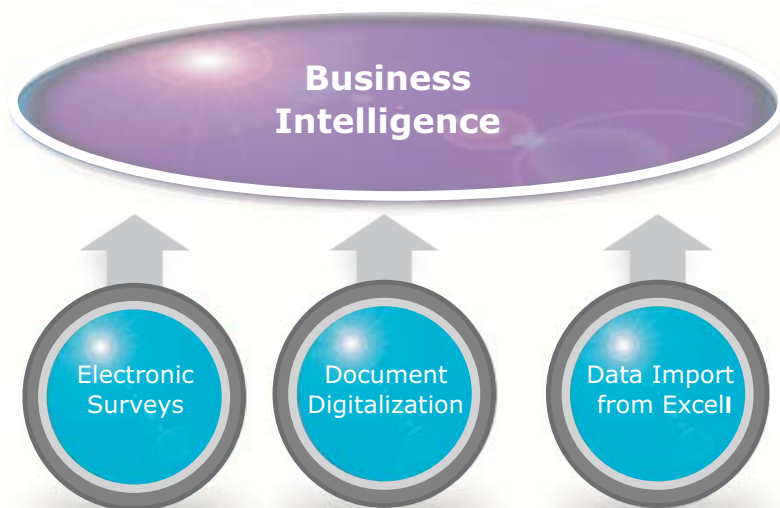

Intelligent Management of the Human Factor

OpenMet System

The OpenMet system automatically converts data obtained from people into numbers, and later groups them into management indicators and control panels, providing an online environment to visualize, analyze results in detail and obtain all kinds of Word and PDF reports. This is always done over the Internet without the need to install anything.

Greatly simplify the task of capturing a large number of responses from thousands of people.

Through reading by scanner and electronic digitalization, the speed in which the data is processed goes up and the cost drops surprisingly.

Allows loading of large volumes of data for use in the Business Intelligence module.

Access to the software can be done by (Software as a Service) or In-house. It's designed for all types of companies including consultants interested in technological platforms.
